

Router

Identify the Parts

Component	Position	Purpose
Power Port	Usually on the back , at one end of the router	Connects the power adapter to turn the router on.
Ethernet Port 1 (LAN)	Back panel, labeled LAN 1	Connects a computer or other wired device to the network.
Ethernet Port 2 (LAN)	Next to LAN 1, labeled LAN 2	Used for another wired device such as a PC or printer.
LED Indicators	Usually on the front top of the router	Show Power, Internet/WAN status, Wi-Fi activity, and LAN connection/activity.

Network Switch

Identify the Parts

Component	Position	Purpose
Power Port	Usually on the back or side of the switch	Connects the power supply to the switch.
Ethernet Port 1	Front panel, labeled 1	Connects a computer, router, or other network device.
Ethernet Port 2	Next to Port 1, labeled 2	Connects another network device.
LED Indicators	Above or beside each Ethernet port and one Power LED	Indicate power status, link status, and data transmission (blinking means network activity).

Summary

- **Power Port:** Supplies electrical power to the device.
- **Ethernet Ports:** Used to connect network devices with Ethernet cables.
- **LED Indicators:** Display the operating status, link connection, and network activity of the device.
