

No. Common Issue		Possible Solution
1	USB keyboard or mouse is not detected by the laptop	Unplug the device and reconnect it to another USB port.
2	Keyboard keys are not responding	Update or reinstall the keyboard driver through Device Manager.
3	Mouse cursor is lagging or freezing	Clean the mouse sensor and update the mouse driver.
4	USB device disconnects frequently	Disable USB power-saving settings and check the cable connection.
5	Wireless USB mouse or keyboard is not working	Replace the batteries and reconnect the USB receiver.

Conclusion: Most USB keyboard and mouse problems can be resolved by checking connections, updating drivers, adjusting power settings, or replacing batteries.
