

step 1: Connect Both Devices to the Same Wi-Fi

1. Turn on your Wi-Fi router or mobile hotspot.
2. Connect your **Windows laptop** to the Wi-Fi network.
3. Connect your **friend's Android phone** to the **same Wi-Fi network**.
4. Ensure both devices are connected successfully.

Step 2: Find the Phone's IP Address

1. On the Android phone, open **Settings**.
2. Go to **Network & Internet** → **Wi-Fi**.
3. Tap the connected Wi-Fi network.

Step 4: Ping the Phone

Type the following command:

```
ping 192.168.1.105
```

Step 5: Check the Result

- If communication is successful, you will see:
Reply from 192.168.1.105: bytes=32 time=5ms TTL=64
- If it fails, you may see:
Request timed out.
or
Destination host unreachable.

expected Output

If both devices can communicate, the ping will show replies with a small response time (usually **1–10 ms**) and **0% packet loss**.

Conclusion (for Practical File)

Both the laptop and the phone were connected to the same Wi-Fi network. Using the **ping** command, the devices successfully communicated with each other, confirming that the local network connection was working properly.
