

Here are some common examples:

Devices that use SMPS (Switched Mode Power Supply)

1. **Laptop Charger** – Uses SMPS because it efficiently converts AC mains power to the low-voltage DC required by the laptop.
2. **Desktop Computer Power Supply** – Uses SMPS to provide multiple regulated DC voltages (+12V, +5V, +3.3V) with high efficiency.
3. **LED Television** – Uses SMPS because it delivers stable DC power to the TV's electronic circuits while reducing power loss.

Devices that use UPS (Uninterruptible Power Supply)

1. **Desktop Computer (with external UPS)** – Uses a UPS to prevent sudden shutdown and data loss during power outages.
2. **Wi-Fi Router connected to a UPS** – Uses a UPS to maintain internet connectivity when the main power supply fails.

Device	Type	Why it needs it
Laptop Charger	SMPS	Efficient AC-to-DC conversion with compact size.
Desktop PC Power Supply	SMPS	Provides stable multiple DC voltages efficiently.
LED Television	SMPS	Supplies regulated DC power with low energy loss.
Desktop Computer	UPS	Prevents data loss during power cuts.
Wi-Fi Router	UPS	Keeps internet running during power outages.
